

TETRA MAPS - step sequencer - ethernet enabled - four analog channels - virtual sequences

What users are saying

Much easier and quicker to use

"It's SO MUCH faster than turning encoders . . . It feels like a new sequencer that's much easier and quicker to use." - Don Kim

You really do have something magic on your hands

"The MAPS is the best sequencer I've ever used for generating true, real-time, intuitive musical composition. It is so intuitive, and even the most powerful features are seamlessly blending into its operation . . . You really do have something magic on your hands, keep it up." - DJ Shaggy

Fills a niche that was previously vacant

"The MAPS fills a niche that was previously vacant. It's one of the rare tools designed specifically to generate new ideas rather than regurgitate preconceived ones."

TetraMAPS features that radically mod your step-sequencing and make your music immediate

Open Sound Control Ethernet port for device networking

Modulate the TetraMAPS using OSC enabled mobile apps such as TouchOSC and Lemur, computer apps like MAX/MSP, and more. Create your own mobile app virtual touch interface.

Analog voice control

Full-featured four channel MIDI to Control Voltage conversion (MCV) with authentic mono synth emulation with eight finger note buffer.

Dynamic sequence triggering moves beyond the traditional step sequencer

Multiple sequence trigger sources, virtual sequence iterations and modes of triggering.

Real time flexibility moves beyond a MIDI sequencer

Real time sequence track control. Sequence step modes. Step and track global modulation.

Other features

Networked display of recognized chords
Available in multiple modular rack and table top formats
Analog and MIDI sync
